PROFESSIONAL SUMMARY

Software Engineer with 1+ year of experience designing and delivering production grade mobile and web applications across Flutter, React.js, Node.js, and Next.js. Shipped 3 end-to-end products a no-code app builder (Appifyours), a multi-tenant church management system (ChurchHub), and a 360° virtual tour creator serving real users with real-time features, payment integrations, and AI capabilities. Strong in full-stack development, REST API design, WebSocket systems, role based access control, and agile delivery. Consistently reduced integration defects by 30% and improved page load performance by 20% through targeted optimizations. Seeking a Software Engineer role where I can build scalable, user centric products and grow into a senior full-stack developer.

WORK EXPERIENCE

Software Engineer | JBB Softech

May 2025 – Present

- Led front-end development of 3 production products using Flutter and React.js delivering 5+ modules per sprint cycle and maintaining zero critical post-release defects across all shipped features.
- Engineered real-time WebSocket communication using Socket.IO across 6 namespaces (notifications, app builder sync, subscriptions, vendor updates, support, and live previews), enabling instant UI updates without page refresh.
- Designed and consumed 20+ REST API contracts in collaboration with the Node.js backend team, cutting integration issues by 30% through early API contract definition and Postman-based validation.
- Optimized Flutter and React.js rendering pipelines through component memoization, lazy loading, and asset compression achieving a measurable 20% reduction in page load time across all products.
- Built a cross-product reusable component library (buttons, forms, charts, modals) in both Flutter and React.js, eliminating ~30% of redundant UI code and reducing new screen development time by half.
- Implemented secure authentication flows including JWT token management, OTP verification, role-based route guarding, and forgot-password recovery across Flutter and Next.js frontends.
- Managed full Git lifecycle feature branching, pull request reviews, conflict resolution, and release tagging across all 3 product repositories using GitHub.

PROJECTS

Appifyours – No-Code Mobile App Builder Platform | Flutter, Node.js, MongoDB, Socket.IO, AWS S3, Razorpay, OpenAI/Groq

- Built a full-featured no-code/low-code mobile app builder with a drag-and-drop interface, real-time live preview, and property editor for styling colors, fonts, and layouts enabling users to create Flutter apps without writing code.
- Architected a multi-tenant backend using Node.js and Express with JWT-based authentication, role-based access control (Super Admin, Admin, End User), and Socket.IO WebSocket namespaces for real-time sync across app builder, notifications, and subscriptions.
- Developed a Node.js code generation engine that converts user-designed app configurations (stored in MongoDB) into complete Flutter project files and compiles them into a deployable APK with one-click GitHub integration for source code upload.
- Integrated Razorpay payment gateway for subscription billing with automated hourly expiry checks, subscription history tracking, and multi-plan management.
- Implemented AWS S3 for scalable image and file storage, Sharp library for server-side image optimization, and OpenAI/Groq AI APIs for AI-powered app generation suggestions.
- Delivered 38+ Flutter screens and 20+ backend route modules including authentication, business management, notifications, and an analytics-driven Super Admin dashboard.

ChurchHub – Multi-Tenant Church Management System | Next.js 14, Node.js, PostgreSQL, Prisma ORM, Redis, JWT

- Architected and developed a multi-tenant church administration platform supporting multiple churches on a single system, with strict church-level data isolation enforced on every database query using Prisma ORM and PostgreSQL.
- Implemented a 4-tier role-based access control system (System Admin, Super Admin, Admin, User) with a JSON-driven permission engine allowing Super Admins to enable/disable 17+ service types (Sunday Service, Baptism, Marriage, Funeral, Youth, Kids, Village Services, etc.) per church.
- Built 15+ REST API modules covering member and family management, attendance tracking, 17 service record types, missionary reporting, minister attendance, and full audit logging with request-level logging middleware.
- Integrated Redis for API rate limiting and caching, JWT for stateless authentication with 7-day token expiry, bcryptjs for secure password hashing, and Multer with AWS S3 for file uploads.
- Developed a dynamic Next.js 14 frontend with role-based dashboard routing, a React Permission Context for conditional UI rendering, and ExcelJS/jsPDF export functionality for generating service and attendance reports.

E-Commerce Mobile Application | Flutter, Firebase, Firestore

- Developed a full-featured e-commerce app with product listings, shopping cart, and user authentication using Flutter.
- Implemented Firebase Authentication and Firestore for secure login and real-time data synchronization.
- Delivered a responsive, intuitive UI adhering to Material Design guidelines.

Visual Walk-In – 360° Virtual Tour Creator | React, Node.js, Firebase

- Developed a 360° virtual tour creator using React, Node.js, and Firebase enabling users to build immersive walkthroughs by uploading panoramic images and linking hotspot navigation points between scenes.
- Implemented an interactive hotspot editor allowing users to place, label, and configure navigation markers on panoramic views, with all tour data persisted in Firebase Firestore for real-time updates.
- Built a shareable tour preview mode with smooth scene transitions and responsive cross-device rendering, making virtual walkthroughs accessible on both mobile and desktop browsers.

TECHNICAL SKILLS

Languages:	Java, JavaScript, Dart
Frontend:	React.js, Next.js 14, HTML5, CSS3, Bootstrap
Mobile:	Flutter (Dart), Android Studio, Cross-Platform Development
Backend:	Node.js, Express.js, REST API Development, Socket.IO
Databases:	Firebase Firestore, MongoDB, PostgreSQL, MySQL, Redis
Cloud & Tools:	AWS S3, Git, GitHub, VS Code, Postman, Prisma ORM
Integrations:	Razorpay, OpenAI/Groq API, JWT, bcrypt, Multer, Sharp

EDUCATION

B.Tech in Information Technology	2019 – 2023
University College of Engineering, Tindivanam, Tamil Nadu	

CERTIFICATIONS

Java Full-Stack Development	2024
• Gained hands-on experience in Java, Spring Boot, React.js, and MySQL through a comprehensive full-stack project.	

ADDITIONAL INFORMATION

Languages:	Tamil (Native), English (Professional), Telugu (Conversational)
Location:	3/215,Kannambakkam,Gummidipoondi, Tiruvallur, Tamil Nadu – 601202
